

Senior Problems Quiz 11-24-42

Jack Jones finishes college in business administration and works for a time in his father's small machine shop, learning the business "from the ground up". He spends some time as a janitor, apprentice lathe operator, timekeeper and purchasing agent. While working there, he meets a teacher, Mary Smith, falls in love with her and marries her.

His father, wishing to retire anyway, turns the plant over to Jack. Jack discovers that there is too much money being wasted in the plant's operation, so after making a study of the situation, eliminates some of the products he has been making. He finds that his profits increase.

In a few years of successful operation, Jack is able to save several thousand dollars. This money he invests in Richfield Oil Co. Stock, the dividends from which he turns over to his wife for her own spending money. She in turn is able to purchase some of the items she desires for their home as well as to buy such clothes as she needs

A
