HOW OUR TRADEMARK WAS BORN

"Why does the Phillips Petroleum Company have '66' in its trademark?"

This is a question many people ask. It has led to some amusing stories that have been perpetuated over the years.

This booklet contains some of the fables — as well as the facts — about the origin of the Phillips 66 shield.

SUPPLEMENTARY MATERIALS

THE FABLES

"Frank Phillips was 66 years old when he started Phillips Petroleum Company."

(It would have been "Phillips 44." Mr. Phillips was born in 1873. The company was incorporated June 13, 1917.)

"Frank and L.E. Phillips, prior to the founding of Phillips Petroleum Company, had only $66 left between them when they hit their first oil well. Immediately they decided that if ever they marketed gasoline they would call it 'Phillips 66'."

(The Phillips brothers drilled several dry holes before they struck their first gusher, and their finances were being stretched to the limit. But whether they had only $66 when their first oil well came in cannot be confirmed.)

SUPPLEMENTARY MATERIALS

"The first 'Phillips 66' gasoline was 66 octane."

(That can't be. The manner of determining octane ratings was not adopted until five years after the name was selected.)

"A Phillips official won the company's first refinery in the Texas Panhandle when its owner rolled 'double sixes' in a dice game. The Phillips directors so liked those 'boxcars' they named the refinery's product 'Phillips 66'."

(Undoubtedly this is a confusion with the refinery's famous neighbor, the 6666 Ranch, which is reputed to have been won in a poker game with a hand of four sixes. The company did not come by its first little refinery so easily.)

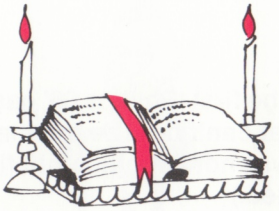

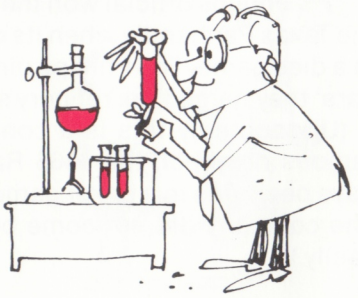

"The 66 was arrived at because of the 66 books in the Bible."

(This story was so often repeated that an elderly lady actually wrote to the company protesting the tie-in as "bad taste commercialism," but like so many other stories, it has no basis in fact.)

"The famous 'controlled volatility' feature of 'Phillips 66' gasoline was perfected after 66 laboratory tests."

(No one knows how many laboratory and other tests were made to perfect the "controlled volatility" feature of Phillips 66 gasoline.)

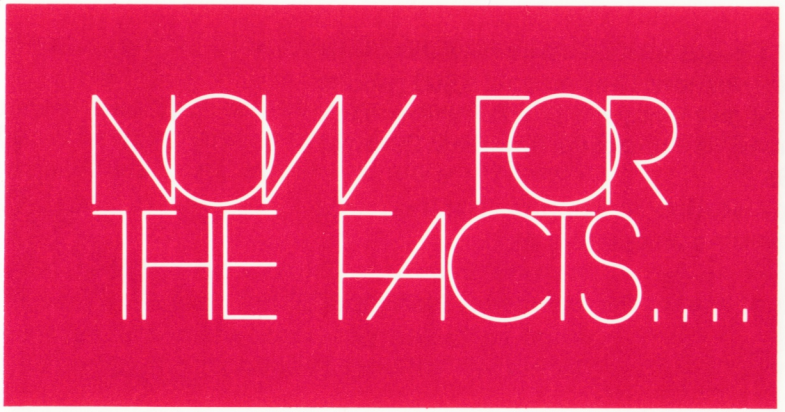

"When the first Phillips station came to closing time on its first day, the dealer noted he had sold 6,600 gallons of gasoline. He turned to a company official nearby. 'Boy, 66 is our lucky number,' he exclaimed. From that moment on it was 'Phillips 66'."

(The first Phillips station in Wichita, Kansas, sold 12,000 gallons of gasoline on opening day.)

These are some of the myths about the Phillips 66 trademark . . .

SUPPLEMENTARY MATERIALS

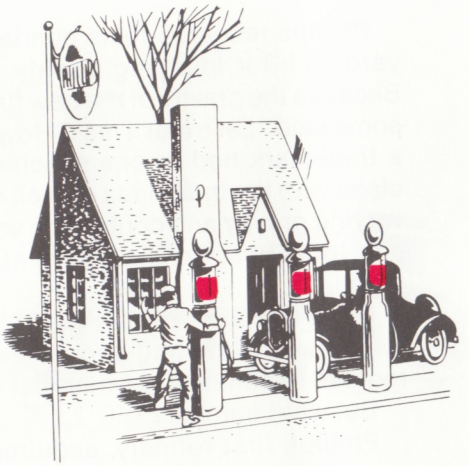

So much for the fables. This is the true story:

The first gallon of Phillips gasoline was to be offered to the motoring public at Wichita, Kansas, on November 19, 1927. Preparations for the big event had kept everybody busy for months in the 10-year-old company, which had been engaged mainly in crude oil production.

In making this bold venture, the company was committed to offering the public a gasoline superior to any on the market. Striving for this goal had caused delays in selecting a mark right up to the last minute.

It was felt that the trade symbol for the new product should be catchy, descriptive and arouse curiosity. But just as in naming a baby, no selection seemed quite suitable.

SUPPLEMENTARY MATERIALS

Phillips research folks pondered the then customary yardstick for implying quality, namely, "high gravity." Because the gravity of the new fuel was in the range of 66, some said "Let's call it '66'." However, they reasoned that a trademark tied to one specific gravity number would clash with the basic idea of their revolutionary concept of varying gravity and controlling volatility to fit all seasons and localities. So the scientists' sponsorship of "66" faded.

Other company people were also trying out ideas for a trademark. Marketing people leaned toward a then current fad of combining a numeral with a word or two.

But what number?

Phillips first refinery, acquired in 1927, was located near Borger, in the Panhandle of Texas, from which

the then heavily traveled U.S. Highway 66 extended through Oklahoma, Missouri and Illinois to Chicago. So, again, "66" had some appeal. However, this idea was shelved because the marketing area was to be much broader than the route of a single highway.

Time was running out. A special executive committee session was called for the sole purpose of settling the question of a trademark.

On the very eve of the meeting, a Phillips official was returning to the company headquarters in Bartlesville, Oklahoma, in a company car being used to road test the new Phillips gasoline.

"This car goes like 60 on our new gas," the official exclaimed.

"Sixty, nothing," answered the driver, glancing at the speedometer, "we're doing 66!"

This incident was reported to the conference the next day. Somebody inquired where this occurred. The reply was, "Near Tulsa on Highway 66."

That did it! "Phillips 66" did sound catchy.

The committee's vote was unanimous. "Phillips 66" would be the banner under which Phillips Petroleum Company would launch its line of gasolines.

In more than half a century since the "Phillips 66" trademark came into being, both petroleum and chemical products bearing this mark have become available in varieties and in areas not even remotely considered by the people who were trying only to arrive at a brand name for gasoline back in 1927.

PHILLIPS TODAY

Phillips is involved in the finding, producing, refining and marketing of petroleum and petroleum products, as well as the manufacturing and marketing of various chemicals.

In the U.S., Phillips markets refined products under the Phillips 66 trademark. Most of its service stations are in the Midwest.

You can learn more about Phillips, Frank Phillips and Route 66 from the following books:

THE PHILLIPS SHIELD HAS A PROUD HISTORY AND A RICH HERITAGE

This disk-shaped shield accompanied the "66" gasoline banner at the first Phillips service station in 1927.

The first "Phillips 66" to appear on a shield-type sign greeted motorists from 1928 to 1930.

SUPPLEMENTARY MATERIALS

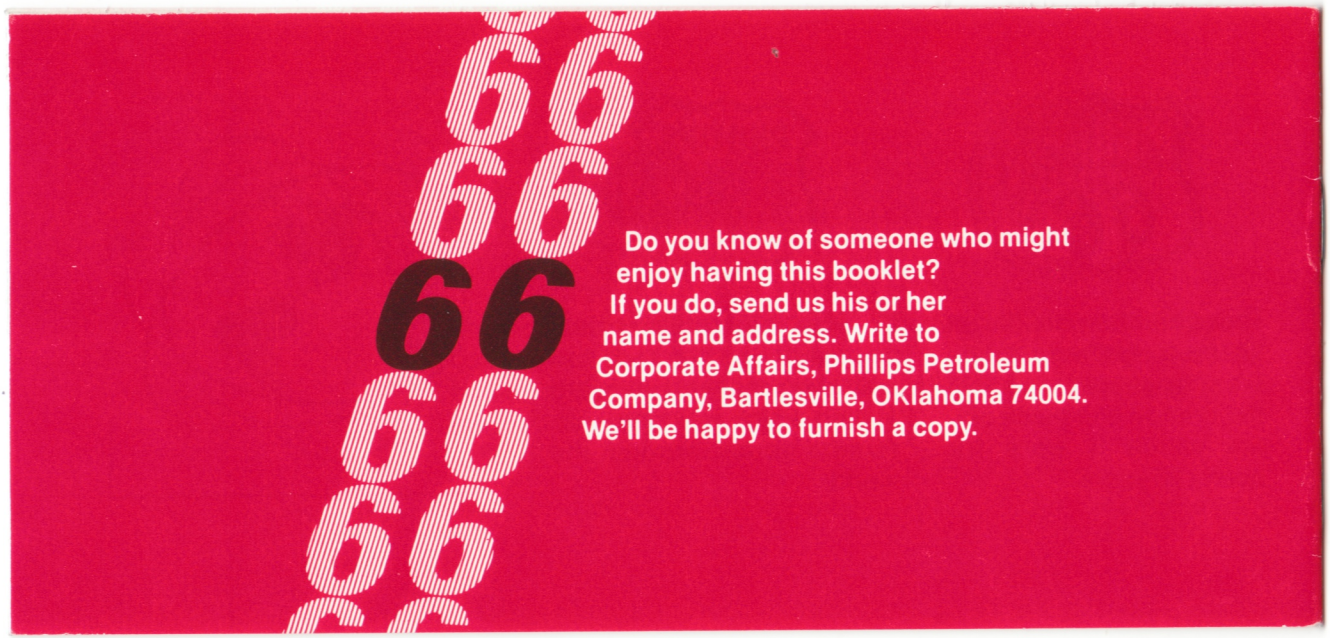

This shield — similar in shape to highway markers — appeared in 1930 in the orange and black colors which it wore for nearly 30 years.

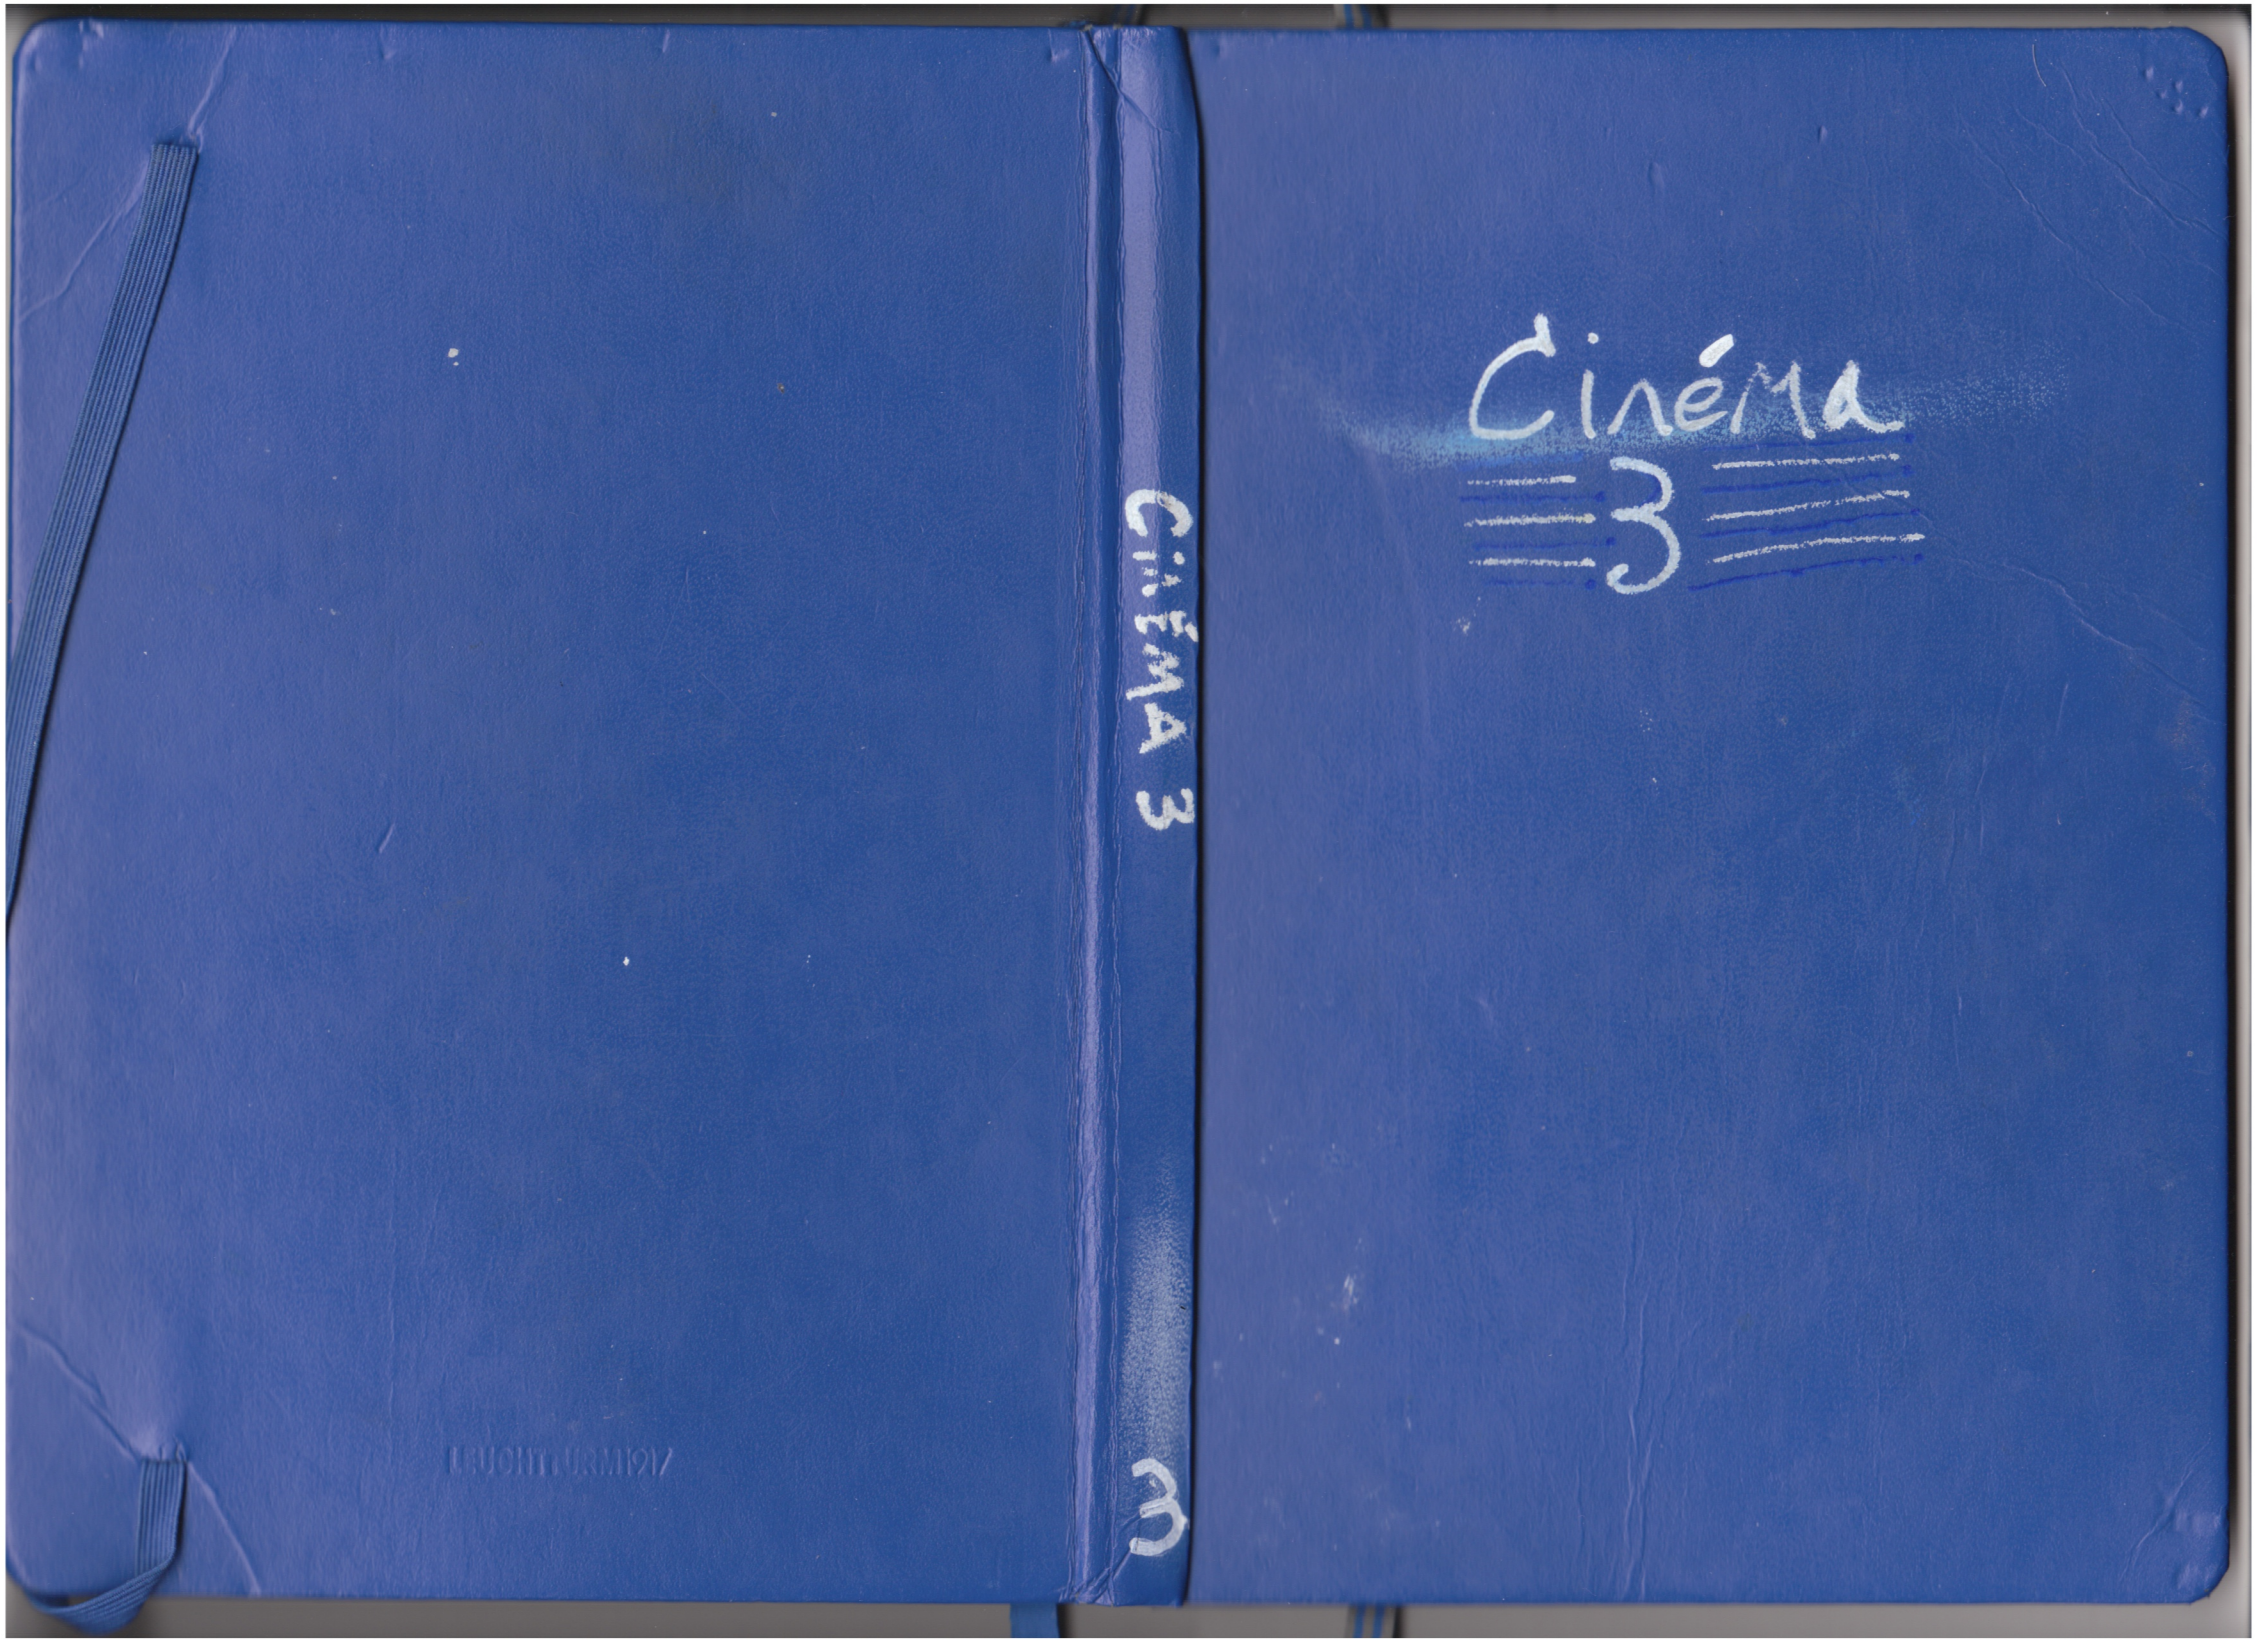

In 1959, the familiar shield appeared in the red and white colors and modern styling which welcome customers today around the world.
